

**LDGR**

## Coincapital STOXX Blockchain Patents Innovation Index Fund

**The first Blockchain Intellectual Property  
ETF to leverage Artificial Intelligence**

### Why intellectual property?

The importance of intellectual property is undeniable as society shifts to a knowledge-based economy. Companies are capitalizing on this transition by allocating resources to researching and developing groundbreaking technologies that will provide the greatest value in the long run. Patents provide their owners with exclusive commercial rights to the process, design or invention for a period of time in exchange for its public disclosure.

### Investing in the knowledge

LDGR invests in the same companies and the proportions as the iSTOXX Yewno Developed Markets Blockchain Index. The iSTOXX Yewno Developed Markets Blockchain Index directly or indirectly invests in equity securities of companies that are positively exposed to blockchain technologies. The key criterion used in the selection process is patent filings related to blockchain IP, thereby identifying blockchain innovators as well as blockchain adopters.

### ETF Snapshot

All registered and non-registered investment accounts

### Key Highlights

**Intellectual Property**

Exposure to companies making value added contributions to blockchain technology. The owners of the knowledge stand to benefit the most from the increased adoption of blockchain technologies.

**Artificial Intelligence**

Efficient screening of the investable universe with Yewno's proprietary AI algorithms, which include machine learning, computational linguistics and knowledge graphs.

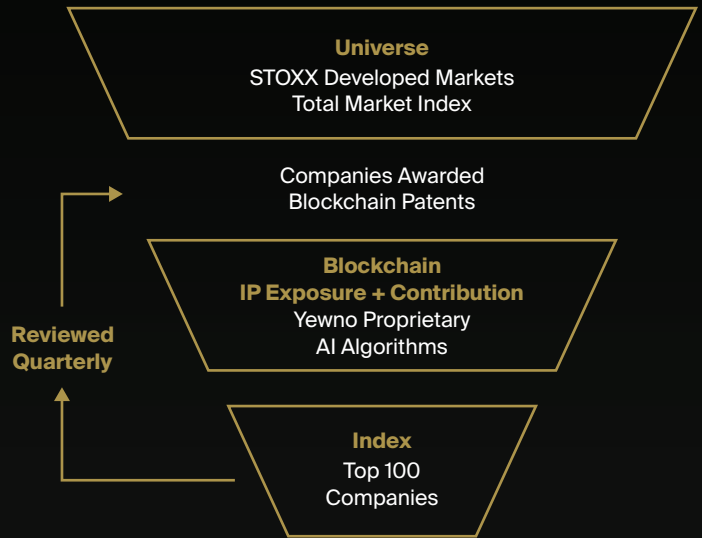

**Global Diversification**

Diversified exposure to innovative companies around the world. Limits the risk of loss due to single companies and geographic locations.

## How it works

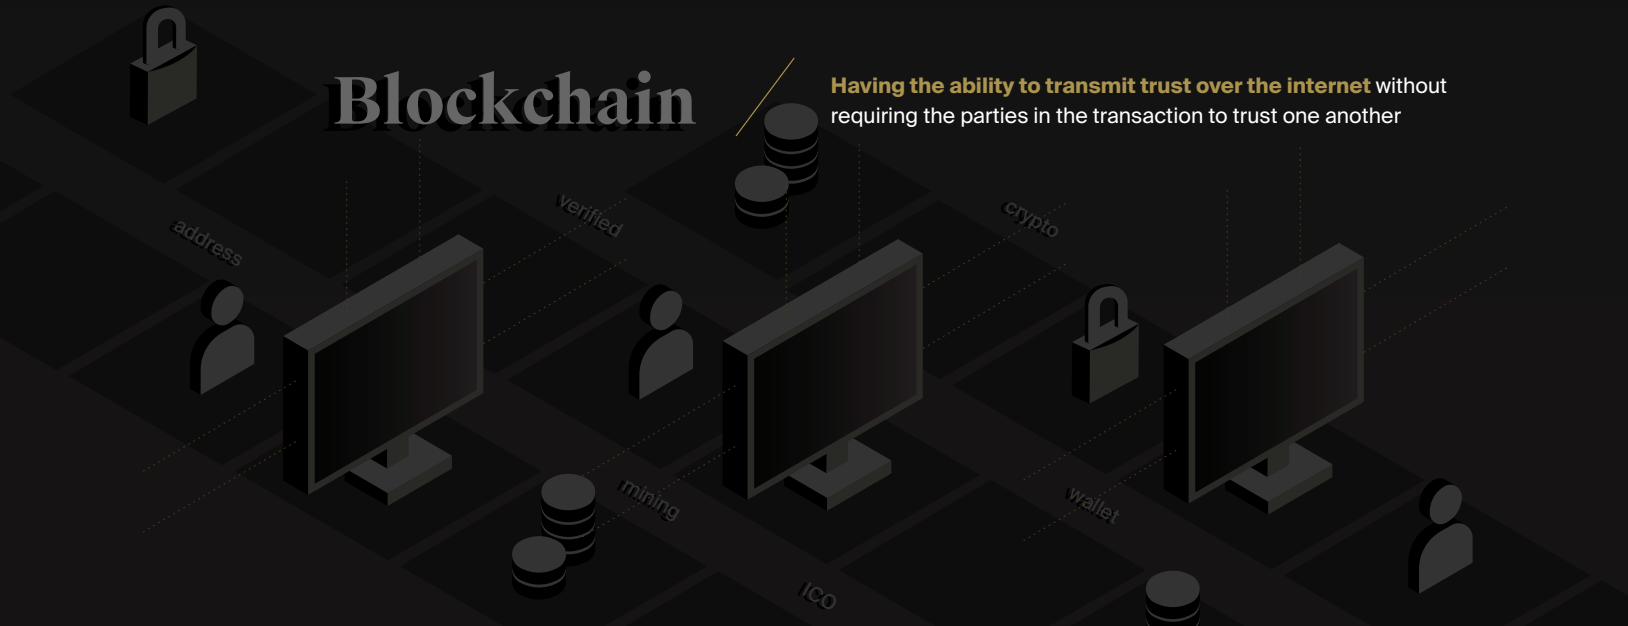

The universe of investable companies begins with the STOXX Developed Markets Total Market index. The universe is screened for index constituents based on patent filings related to blockchain technologies. The companies are scored by Yewno with their proprietary artificial intelligence algorithms with two metrics, Blockchain Intellectual Property Exposure and Blockchain Contribution. The top 100 scoring companies are included in the index.

## Notable Holdings

## Blockchain at a glance

Having the ability to transmit trust over the internet without requiring the parties in the transaction to trust one another

The blockchain protocol operates as a **layer on top of the Internet on a network** of computers.

Each of these computers carries a copy of the ledger and is identical across the network **without a middleman**.

According to Gartner's forecast, blockchain technology is expected to create US\$176 billion of business value by 2025.

- Gartner, Forecast: Blockchain Business Value, Worldwide, 2017-2030
